

2021 Stand-Down to Prevent Falls in Construction

A Snapshot Based on OSHA's Certificate of Participation Database & CPWR's Online Ordering Form

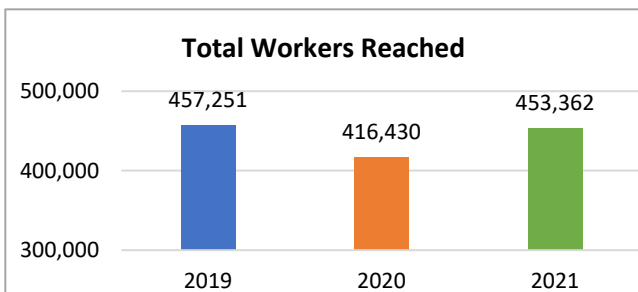

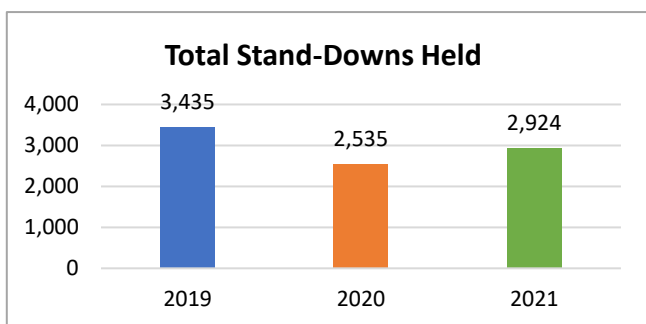

In 2021, **2,924 stand-downs** reached **453,362 workers**. **Commercial construction** was the most selected type of construction for both stand-downs held (43%) and workers reached (36%).

Texas, California, Louisiana, New York, and Florida held the largest number of stand-downs. **Alabama, California, Texas, Louisiana, and New Mexico** reached the highest number of workers in their events.

153 stand-downs were held internationally, reaching **69,289** workers abroad.

Stand-Down participation rebounded in 2021 despite the challenges of the ongoing pandemic. Compared to 2019, the final Stand-Down before the pandemic began in 2020, the total number of **stand-downs held decreased in 2020 but partially recovered in 2021.**

The total number of **workers reached decreased in 2020 but almost fully recovered in 2021.**

Main Messages of 2021 Stand-Downs

Falls happen in a split second

Falls have serious and life-changing consequences

Fall prevention is a year-round organizational value

Falls can be prevented by paying attention and speaking up

In 2021, CPWR distributed close to **250,000 FREE hardhat stickers**, available to order each year before the Stand-Down at stopconstructionfalls.com.

Stand-Down Size by Number of Workers Present

Top Stand-Down Activities

Forty-four percent of stand-downs held were for fewer than 20 workers. Top activities included **trainings, meetings/ huddles, toolbox talks, videos, and demonstrations.** Many event organizers combined multiple types of activities during their stand-downs.

“This was **my first year** for the Safety Stand-Down, and I've **enjoyed it thoroughly.**”

“We shared **videos showing good and bad examples of fall protection**, then used actual examples from around our facility so that the **topic hit a little closer to home.**”

“The material used **raised awareness of fall hazards** on the job and...the **risks and consequences of falls in construction.**”
